PROFESSIONAL SYNOPSIS

- Business Intelligence Developer with **5.7 years** of experience using various methodologies and BI Tools.
- Design and Build **Business Intelligence** Solutions to meet Customer Specifications.
- Performed **Data migration** tasks from various data sources.
- Developed data warehouses and data marts as per client's requirement.
- Prepared business requirement documents.
- Design and Developed Implemented and Supported **Power BI** dashboards.
- Comprehensive understanding of Data Warehousing and Business Intelligence concepts.
- Effectively translated end-user reporting requirements into functional design documents.
- Well acquainted with **SDLC** and exposure to **Agile Methodology**.
- Extensive work experience in **Data Integration, Semantic Data Modeling, Data Analysis, Reports Development, Testing of Reports Performance**.
- Experience into writing **SQL queries, T-SQL, DAX, Oracle SQL**.
- Indulged in testing of Power bi reports performance.
- Implemented various visualization and reporting techniques.
- Preparing **Technical Documents** and User Manual and handing over the application to support team after UAT.
- I implemented **Power bi on-premises Gateways** to power bi service (cloud) for data transmissions.
- Server monitoring and making sure data getting refreshed at its scheduled time and trouble shooting whenever necessary.

TECHNICAL SKILLS

Languages	SQL, DAX, T-SQL, Oracle SQL, M-Language
Operating Systems	Windows 10, 11, Linux
Database	SQL Developer, Excel, Oracle, Tabular Cubes
SDLC	Agile Model, Waterfall Model
BI Tools	Power BI, MSBI (SSIS, SSAS, SSRS)
Designed Schemas	Star Schema, Snow Flake Schema
ETL	Power Query Editor, SSIS (Sequel Server Integration Services), SQL Wizard
IDE's	Power Desktop, Visual Studio (Ver. 2017, 2019), SSMS (2017, 2019), Oracle
Applications	MS Teams, Outlook, Jira Software, Git Hub, Citrix

PROJECTS EXECUTED

Client: DTCC

Role: BI Developer (Data Integration)

Duration: May2022 – July2023

Reporting Tool :Power BI, SSMS,SSIS,
Talend, Snowflake,Oracle,Jira

Team Size : 7

Description

A provider of clearing and settlement services to the financial markets, the Depository Trust & Clearing Corporation (DTCC) is a post-trade financial services corporation based in the United States. It conducts securities exchanges on behalf of buyers and sellers and serves as a central securities depository by providing custody of all the securities. Our project main objective was to automate the delivery process and to understand the status of the each project of the ease the project life of a project manager by providing an easy way to track their business in terms of Project Datailes view and Holistic project view.

Responsibilities:

- Analysing business requirements and developed BRD's.
- Participated in various meetings to discuss Enhancement and Modification Requests.
- Desined the dataflow architecture, which has elebrated the end to end flow of the project
- Developed the necessary Infrastucture for this project.
- Designed the database for QA and Production environments.
- Implemented Data Staging from ODS.
- Performed various Data migration tasks using **Sequel Server Wizard**.
- Performed data transformations and loaded data into QA server.
- Implemented semantic modeling using **SSMS**.
- Developed the optimized data models.
- Using **Power BI** developed parameterized reports.
- Implemented the data modelling and performed analysis using aggregation functions.
- Developed the shared Power BI Data gateways for schedule refresh.
- By using **DAX** created calculated columns, Measures, Tables and dynamic card visuals.
- Developed automation of JIRA controls using **Power BI dataflows**.
- Provided the access to end users.

Client: ICICI Bank

Role: BI developer (Data Migration)

Duration: May2020 – Mar 2022

Reporting Tool : SSMS / Power BI

Team Size : 8

Description

ICICI bank is an Indian multinational bank and financial services company. It offers wide range of banking services and financial services for corporates and retailers. Our main objective of this project is to analysis the business of all portfolios which are Insurances, Mutual Funds, Loans, Cash Inflow and outflow by Location wise, Revenue wise, Products wise reports.

Responsibilities:

- Analyzing business requirements documents and functional specs.
- Participated in various meetings to discuss Enhancement and Modification Requests.
- Getting Data from Different sources and performed some data transformation and Integration operations with **SSIS**.
- Implemented staging and migrated data from various sources into staging with the help of SSIS.
- Created projects and packages in **SSIS**.
- Gathering requirement from stakeholders and translating business requirements into meaningful KPIs with help of Business Analyst.
- Created meaningful semantic data models.
- Worked on semantic Modeling, Implemented Star schema & Snow flake schema.
- Implemented Incremental Load to improve Load Time.
- Created various kinds of visualization using Power BI such as Charts, Tabular chart & Conditional Formatting for Platform testing and Smoke Testing.
- Implemented the Incremental load and Involved in the Performance tuning.
- Tested Applications, ensuring the application met the requirements, Data quality for Quality Assurance before delivering to the end users.
- Attended Daily Stand-up meetings and project Initialization meetings.
- Designing data modeling and implemented Schemas(Star & Snow Flake)
- Created Different layouts of data models for quick and detailed reports.

Client: Mutual of Omaha

Role: BI Developer (Reports Building)

Duration: May2019 – Sep 2021

Reporting Tool : Windows/MSSQL /Power BI/Visual Studio

Team Size : 6

Description

Mutual of Omaha is insurance and financial services company in United States it offers variety of insurance and financial products for individuals and business providers and groups throughout the United States. Our Main Objective of this project is track the growth and sales of the insurance Products by developing reports.

Responsibilities:

- Analysing business requirements documents and functional specs.
- Participated in various meetings to discuss Enhancement and Modification Requests.
- Getting Data from Different sources and performed some data transformation and Integration operations with **SSIS**.
- Designing data modelling and implemented Schemas(Star & Snow Flake)
- Created Different layouts of data models for quick and detailed reports.
- Designing and developed Power BI Reports, Documents, Dashboards and score card as per specific requirements and timelines.
- Developed various Reports as per customer requirements.
- Experience on KPI (key performance Indicators).
- Creating Customized and Interactive dashboards using data sources and custom objects.
- Performance tuning and optimized extracts for dashboards.
- Preparation of Test Scenarios, Test Cases and Execution of Test Cases.
- Attending the weekly Status call with onsite team.

- Deployed reports in production.
- Created end to end Active Reports.
- By using DAX functions created efficient reports.
- Published to Power BI Service (Cloud).
- Created Workspace's, App in Power BI Service.

Client: The Sherwin-willams

Role: BI Developer (Data Integration)

Duration: Dec2017 – Mar2019

Reporting Tool : MSSQL /Power

BI/Visual Studio/Jira

Team Size : 7

Description

The Sherwin Williams is a leading US paint industry manufacturing full range of coatings which include architectural industrial and protective variants. Our project main objective was to ease the life of a sales manager by providing an easy way to track their business in terms of year wise, month wise, region wise, customer wise Reports.

Responsibilities:

- Analysing business requirements documents and functional specs.
- Participated in various meetings to discuss Enhancement and Modification Requests.
- Implemented Data Staging from ODS.
- Performed various Data migration tasks using **SSIS**.
- Performed data transformations and loaded data into Data Staging.
- Created Different layouts of data models for quick and detailed reports.
- Developed optimized data model.
- Implemented semantic modeling using **SSAS**.
- Created Tabular model using **SSAS**.
- Implemented the data modelling and performed analysis in SSAS.
- Implemented Portions and Perspectives in **SSAS**.
- Processed partitios using SSIS packages.
- Scheduled SSIS packages using SQL server agent.
- By using **DAX** created calculated columns, Measures, Tables and KPI's.
- Processed the tabular cubes using **SSIS**.
- Automating the SSIS packages using SQL Server Agent.

EDUCATION

- B.Tech From Jawaharlal Nehru Technological University Ananatapur(2013-2016)
- Diplom From State Board of Technical Education and Training A.P(2010-2013)

Work Experince

- **ITC Info tech(Client) Dec-2017-2022**
Designation :- Software engineer
- **Birlasoft Mar-2022-Till Date**
Designation :- Technical Speci

CERTIFICATIONS

- Certification in Data warehousing Fundamentals
- Certification in Data warehousing Database Design
- Certification in Power BI

Work Place Trainings

- Workplace Compliance Training.
- Data Privacy Awareness Training.
- Anti-Bribery and Anti-Corruption Training.
- Business Continuity and Crisis Management.
- Information Security Awareness Training.
- BFSI- Capital Markets.

Accomplishments

- Received highest Customer Satisfaction Index(CSI) of 100% from Customers.
- Received client appreciation on successful completion of Data Integration Project.
- Received client appreciation on successful completion report Publishing.

Declaration

I hereby declare that the information given above is true to the best of my knowledge and belief.
