## SKILLS

Hive, Spark

HDFS

AWS, Azure Databricks

PySpark

SQL, Airflow, Talend, Presto

## LANGUAGES

English

## ABOUT ME

I am a senior software professional with over 7 years of experience in IT and big data, specializing in building data pipelines and performing data analytics. I possess deep hands-on technical expertise in working with large amounts of structured and semi-structured data. Additionally, I have a profound understanding of Hadoop architecture and its components, including HDFS, YARN, Hive, and Spark. I have hands-on experience with both on-premise and cloud technologies, such as AWS and Azure Databricks.

In addition to my technical competence, I have extensive experience in project management, stakeholder management, and mentorship.

## WORK EXPERIENCE

Big Data Engineer  
IBM Consulting / Gurugram / Aug 2022 - Present

- Client: Macquarie Group Services Australia Pty Ltd (Banking and Financial Services)
- Implemented a robust Big Data platform on AWS, extracting data from AWS S3 in CSV format and efficiently converting it to Parquet format for enhanced performance and storage optimization.
  - Transformed banking and finance customer data to meet specific use cases related to loans, credit cards, and other services offered by the bank, ensuring data accuracy and adherence to business requirements.
  - Developed and managed Hive tables on AWS S3, organizing and structuring data according to business needs. Utilized Spark for performing analytics and gaining valuable insights from the data.
  - Leveraged Talend to identify existing data pipelines and create new ones, streamlining data integration processes and ensuring seamless data flow across systems.
  - Implemented Airflow for loading monthly, quarterly, and daily data, enabling development and data validation activities. Ensured the reliability and accuracy of data through comprehensive validation processes.
  - Utilized data from S3 for various business purposes, collaborating with stakeholders to meet their specific data requirements and provide insights for informed decision-making.
  - Efficiently scheduled jobs using Control-M, ensuring timely execution and reliable data processing within the defined schedules.

Senior Software Engineer  
Capgemini Engineering / Gurugram / Apr 2021 - Aug 2022

- Client: Ericsson Global
- Developed and managed a comprehensive Big Data platform on Azure Databricks, specializing in data extraction from SAP HANA and subsequent ingestion into the Data Analytics Platform (DAP).
  - Successfully extracted transactional sales and purchase data from SAP HANA, ensuring data integrity and accuracy during the ingestion process into the DAP.
  - Created tables and efficiently organized data on the DAP, utilizing Spark SQL for performing advanced analytics and generating valuable insights from the data.
  - Implemented Delta tables within the Azure Databricks environment, facilitating efficient change data capture (CDC) mechanisms and enabling real-time data processing.
  - Leveraged Azure Databricks to write data back to the DAP, catering to visualization requirements and supporting various business purposes.

Big Data Developer  
Reliance Industries Limited / Mumbai / Jan 2019 - Jan 2021

- Orchestrated the implementation and integration of various Big Data tools and frameworks within the Cloudera Data Platform, ensuring the provision of requested capabilities and meeting business requirements effectively.
- Oversaw the data loading process from disparate data sets and performed preprocessing tasks using Hive, ensuring data integrity and optimal data preparation for downstream analysis.
- Utilized Pyspark with Presto to efficiently read and retrieve data from MongoDB, Hive, and MySQL databases, transforming them into structured DataFrames for further processing and analysis.
- Leveraged Spark RDDs and DataFrames for in-memory data computation, allowing for high-performance data processing and generating output responses in an efficient manner.
- Employed PySpark to process large volumes of structured data, ensuring effective data transformation, aggregation, and analysis to extract valuable insights.
- Implemented data cleansing techniques and moved the cleansed data to the Consume layer, enabling seamless integration with visualization tools for creating impactful and intuitive data visualizations.

Big Data Engineer  
Pentation Analytics / Mumbai / Apr 2018 - Sep 2018

- Big Data Platform: Hortonworks Data Platform
- Setting up the database for hive using PostgreSQL
- Importing data from PostgreSQL and MS SQL using Scoop
- Creating hive external table for PostgreSQL, MS SQL and Neo4j data so that data analyst can connect R studio with hive
- Connecting Neo4j database to hive to process the data and then writing the results back to HDFS
- Setting up of Redshift cluster and S3 bucket to import the data to Redshift
- Created OLAP Data warehouse schema into Redshift in normalized form for faster execution of data

Engineer  
Huawei Technologies / Bangalore / Apr 2015 - Apr 2018

- Loading customer data files to HDFS and developed hive queries to mine data.
- Coordinate with the client and get the functional architecture and high-level design for project.
- Done Analytics on customer data like postpaid/prepaid calls to analyze weekly/monthly/Yearly revenue generated
- Investigating faults, providing technical reports to identify cause of problems, and giving preventive guidance.
- Researched and resolved issues regarding the integrity of data flow into databases.

## EDUCATION

Bachelor of Technology  
Sir Padampat Singhania University / Udaipur, Rajasthan / 2013
