

Amol Jadhav

Data Engineer

✉ Amolsillodkar12@gmail.com

☎ 9075726677 📍 Sillod, MH, India

Profile

Having 3 + years of Experience data engineer with a passion for transforming complex data sets into meaningful insights. Proficient in a variety of programming languages like (SparkSQL, Python, PySpark) , with a proven track record of implementing robust data pipeline.

Technical Experties

- Having 3+ years of experience in IT as Data Engineer.
- Have experience writing data extraction logic in Spark.
- Extracting and analysing data using Snowflake, Spark-Python on cloud premises.
- Have a hands-on experience on Amazon web services mainly S3, EC2, AWS EMR, Redshift, IAM Roles, RDS, Lambda, Glue.
- Have experience with Data Flow, Data Pipeline and workflow management tool.
- Working with processing large amount of structured and unstructured data, including integrating data from multiple sources.
- Perform task such as loading different file formats in spark/hive, write SQL queries, etc.
- Develop batch processing, integration solutions and process structured and Unstructured Data.
- Good Knowledge on Spark Architecture including Spark-Core, Spark-SQL.
- Handling Hadoop distribution like Cloudera.
- Experience in creating tables, partitioning, bucketing, loading in Hive.
- Transferring data from RDBMS to HDFS and Hive tables using Sqoop and Spark API's.
- Gather and process raw data at scale and analyse processed data.
- Ability to create Visualization using visualization tool POWER BI.

Organization Details:

Organization:	INFISTER TECHNOLOGY PVT LTD
Designation:	Data Engineer
Duration:	01 June 2020-Present

Technical Competencies

Operating System	: Windows, Linux
Big Data Ecosystem	: Hadoop, MR, Hive, Sqoop, Spark
Programming language	: Python

Scripting language	: Shell Script
Spark Technologies	: PySpark, Spark, SQL
IDE	: PyCharm, Putty, SQL workbench, Jupyter
Cloud Technologies	: AWS (EC2, EMR, IAM, Glue, lambda, S3, Step function)
RDBMS	: Oracle, MYSQL, MSSQL
Visualization Tool	: Power BI
Secondary skill	: Snowflake, Redshift, AWS(Athena, Crawler), Nifi.

Work Experience

Project #1: Data Migration and Analytics in E-Commerce Domain

Description: In this project we deal with structure and unstructured data of E-Commerce Domain. We get Different types of data related to Customer facing the slow performance of large analytical data as all directly connected to their application so to avoid this we have to prepare data lake for unify data to get meaningful information. on this raw data we have to process and store in Redshift with the the help of glue job. also we have to create different type of glue job to get data as per client requirement.

Roles and Responsibilities:

- We have configured the AWS DMS to load the data from oracle to the s3 that is one time load (historical load) and also for the data.
- Developed PySpark programs to extract data from S3 bucket.
- Developed PySpark Programs for transformation operation for further processing in AWS glue job.
- Involved in working on Spark SQL code as an alternative Approach for faster data processing and better performance.
- Creates connection with redshift and move processed data into it.
- Define all the possible Test Cases along with Test Data.
- Implement Data Validation, Quality Checks, profiling. Perform UAT of Big Data implementation.
- Engage with BA to understand the requirement clearly.

Skilled Used: Oracle, PySpark, S3, IAM, AWS Glue, AWS Lambda, Redshift.

Project #2: Marketing Data Analytics

Description: The goal of this project is to identify patterns and trends in the data that can inform business strategies and provide actionable recommendations for the company. In this project we deal with structure and unstructured data of Sells Marketing Domain. We get Different types of data related to the amount of articles, that might get sold and therefore to better estimate how much articles should be produced. on this raw data we have to process and store in Snowflake with the the help of glue job. also we have to create different type of glue job to get data as per client requirement.

Roles and Responsibilities:

- Developing new PySpark job and enhances as per requirement. if already developed job fails, then it's also my responsibilities to debug and support.
- Processing data using PySpark in aws glue job, Analyzing PROD Ticket, noticing and Resolving the issue.
- When file uploads in S3 bucket it will trigger the lambda function and lambda will start the execution of glue job.
- Enhanced PySpark and Spark SQL code to improve performance of Pipeline.
- Using AWS CloudWatch to check the logs for data.
- To monitor existing data pipeline.
- Develop new pipelines, glue jobs, lambda applications as per the requirement.
- Write SQL query in Snowflake to extract data as per business requirement.
- finally store the processed data in snowflake data warehouse.

Skilled Used: Oracle, PySpark, S3, IAM, AWS Glue, AWS Lambda, Snowflake.

Education

Bachelor of Engineering (65.90%) : R.C Patel Institute of Technology Shirpur, Dhule.

Languages :-> English, Hindi, Marathi.
